GARDNER DENVER® DRUM® GD 150 VALVE TYPE COMPRESSOR

The GD150 is a lightweight, compact rotary vane compressor designed for the oil free discharge of bulk liquids from general purpose tankers, e.g. liquid foodstuff, solvents, acids, alkalis, hot bitumen, resins and other chemicals. The main benefit of using a compressor to discharge liquid is that the product does not come into contact with the machine. This eliminates the problems of compatibility between the liquid and the compressor components.

AUTHORIZED DISTRIBUTOR

GD 150 VANE TYPE COMPRESSOR

The Standard Package consists of the following equipment:

- Basic GD150 machine and mounting kit
- Induction kit including cyclonic inlet filter
- Relief valve
- Check valve
- Stainless steel discharge flange pack

General Design: The machine is an oil free sliding vane design supported by bearing arrangements at both ends of the rotor. All the components used in the main bore cavity are hard anodized aluminum or stainless steel to maximize the resistance to atmospheric corrosion.
